

## Forecasts your CFO can stand behind.

Self-serve forecasting for finance teams: the rigour of a quant team, in a few clicks. No model to build. No model to maintain.

### Consistent accuracy gains

Better than pre-trained and statistical models

- Matches or outperforms your internal baseline once your driver data is plugged in
- Holds its accuracy as your business evolves, with automatic drift detection and refit

### Production-ready in hours

No setup. No model. No engineers required.

- Drop in an Excel file and get production-grade forecasts in hours, not weeks
- The system selects the right model, so your team doesn't have to

### Defensible to the board

Confidence bands & drivers on every forecast

- Statistically validated confidence intervals, not gut-feel ranges
- Every forecast explains itself, with automated driver analysis and a full audit trail

### HOW IT WORKS

Drop a spreadsheet → Set parameters → Get forecasts

#### Two ways to use it

One-off backtests/forecasts or wired into your monthly cycle with periodic refresh

#### At scale

Tens of thousands of forecasts per run: SKUs, customers, departments, regions

#### Always reconciles

Hierarchical coherence: top-down and bottom-up forecasts always agree

### BATTLE-TESTED ON REAL FP&A DATA WITH UP TO 30% ACCURACY GAINS

#### CFO office, Fortune 500

**+15% accuracy vs. their baseline**

Revenue forecasts across customers, products and regions — refreshed in hours, not quarters.

#### Consulting firm — client engagements

**2+ weeks → 1 day**

Senior-analyst accuracy applied to the long tail your team can't reach.

#### Aviation ops planning

**Matching accuracy, fully automated**

Per-flight passenger forecasts wired directly into ground-ops scheduling.

### Choose your plan

#### Pro

**USD 500** / user / month

or **USD 5,000** / user / year upfront — save **USD 1,000**

**One month free trial** · No onboarding fees · Cancel anytime
